

This document describes the various files used in the project.

The various files used are –

The input files –

The input files are nothing but the recipe .txt files. Each recipe is a separate .txt file with filename recipe1.txt, recipe2.txt and so on. There are 20 such files. These are the input files in the program. These files are stored in a folder named 'recipes'.

The output files –

Few of the outputs are printed directly in the program itself using the print() statement.

The other output files are –

Recipe names.txt –

This file has the names of the recipes used in the program as the base data

RecipeAndIngredients.csv –

This file has 2 columns, Recipe name and Number of Ingredients. It gives the Number of ingredients used in each recipe.

Recipes with Optional Ingredients.txt –

This file has the names of the recipes which have optional ingredients.
